Author index for papers in Volume 31

Pages are numbered consecutively through the volume: 1–148, January; 149–274, March; 275–416, May; 419–510, July; 511–606, September; and 607–700, November.

Adler, R. L.
224 *The torus and the disk*

Anderson, K. L., F. C. Mintzer, G. Goertzel, J. L. Mitchell, K. S. Pennington, and W. B. Pennebaker
16 *Binary-image-manipulation algorithms in the Image View Facility*

Astesiano, Egidio and Gianna Reggio
512 *Direct semantics of concurrent languages in the SMoLCS approach*

Auslander, L. and M. Shenefelt
213 *Fourier transforms that respect crystallographic symmetries*

Bantz, David F.
44 see Gupta, Satish

Bogy, D. B.
96 see Shield, T. W.

Brayton, R. K.
187 *Factoring logic functions*

Chamberlin, Donald D.
58 *Document convergence in an interactive formatting system*

Chen, Yi-Hsin, Frederick C. Mintzer, and Keith S. Pennington
32 *PANDA: Processing Algorithm for Noncoded Document Acquisition*

Ciskowski, R. D., C. H. Liu, H. H. Ottesen, and S. U. Rahman
571 *System Identification: An experimental verification*

Cohen, Hirsh
158 *Applied mathematics, a national view*

Cohen, Paul S.
81 see Mercer, Robert L.

Coppersmith, D.
244 *Cryptography*

Cowlishaw, M. F.
73 *LEXX—A programmable structured editor*

Cressler, J. D.
617 see Stork, J. M. C.

Cvetanović, Ž.
435 *Performance analysis of the FFT algorithm on a shared-memory parallel architecture*

Cvetanović, Ž.
452 *Best and worst mappings for the omega network*

Darema, F., S. Kirkpatrick, and V. A. Norton
391 *Parallel algorithms for chip placement by simulated annealing*

Davari, B.
627 see Taur, Y.

DeOrazio, William R.
44 see Gupta, Satish

Evangelisti, Carlo J.
44 see Gupta, Satish

Evans, R. C., G. Koppelman, and V. T. Rajan
343 *Shaping geometric objects by cumulative translational sweeps*

Farouki, Rida T.
314 *Trimmed-surface algorithms for the evaluation and interrogation of solid boundary representations*

Fitzgerald, W. J.
277 see Wolfe, R. N.

Flynn, Michael J.
420 see Wakefield, Scott P.

Franaszek, P. A.
120 *Path hierarchies in interconnection networks*

Ganin, E.
617 see Stork, J. M. C.

Geffken, Robert M., James G. Ryan, and George J. Slusser
608 *Contact metallurgy development for VLSI logic*

Gentili, Graziano
335 see O'Connor, Michael A.

Glimm, J. and D. H. Sharp
169 *Numerical analysis and the scientific method*

Goertzel, G.
16 see Anderson, K. L.

Goertzel, Gerald and Gerhard R. Thompson
2 *Digital halftoning on the IBM 4250 Printer*

Goldstine, H. H.
154 *Reflections on the early days of the department*

Gomory, Ralph E.
151 *Science in industry*

Goyal, Ambuj and Stephen S. Lavenberg
651 *Modeling and analysis of computer system availability*

489 see Huang, Ching-Chao

Yashchin, Emmanuel
199 *Some aspects of the theory of statistical control schemes*

Zable, J. L. and H. C. Lee
679 *Font design for high-speed impact line printers*

Zhou, T.
382 see Hood, S. J.

Subject index for papers in Volume 31

Each index entry below is accompanied by an author's name and a page number; the author index contains the title of the paper and the names of coauthors, if any. Communications are identified by (C).

Subject	*Author*	*Page*
Algorithms		
A method for efficient storage and rapid application of context-sensitive phonological rules for automatic speech recognition	Mercer	81
Best and worst mappings for the omega network	Cvetanović	452
Binary-image-manipulation algorithms in the Image View Facility	Anderson	16
Digital halftoning on the IBM 4250 Printer	Goertzel	2
Efficient randomized pattern-matching algorithms	Karp	249
Efficient search techniques—An empirical study of the *N*-Queens Problem	Stone	464
Factoring logic functions	Brayton	187
Feature analysis for symbol recognition by elastic matching	Kurtzberg	91
PANDA: Processing Algorithm for Noncoded Document Acquisition	Chen	32
Parallel algorithms for chip placement by simulated annealing	Darema	391
Performance analysis of the FFT algorithm on a shared-memory parallel architecture	Cvetanović	435
Piecewise-circular curves for geometric modeling	Rossignac	296
Shaping geometric objects by cumulative translational sweeps	Evans	343
Simple unit vectors orthogonal to a given vector	O'Connor	335
Trimmed-surface algorithms for the evaluation and interrogation of solid boundary representations	Farouki	314
Voronoi diagram for multiply-connected polygonal domains I: Algorithm	Srinivasan	361
Voronoi diagram for multiply-connected polygonal domains II: Implementation and application	Meshkat	373
Analysis		
Delamination and fracture of thin films (C)	Klokholm	585
Exact analysis of round-robin scheduling of services (C)	Takagi	484
Numerical analysis and the scientific method	Glimm	169
Some stability techniques for multistep methods	Odeh	178
Approximation theory		
A view of Approximation Theory	Rivlin	162
Biology		
DNA vectorgrams: Representation of cancer genes as movements on a 2D cellular lattice	Pickover	111
Circuit design		
Ferroresonance	Scoggin	665
Chip placement		
Parallel algorithms for chip placement by simulated annealing	Darema	391
Coding		
Cryptography	Coppersmith	244
Complexity theory		
The complexity of computation by networks	Pippenger	235
Computational linguistics		
A method for efficient storage and rapid application of context-sensitive phonological rules for automatic speech recognition	Mercer	81
Computer-aided design		
An algorithm for automatic identification of R-fields in bond graphs	Hood	382
Parallel algorithms for chip placement by simulated annealing	Darema	391

Piecewise-circular curves for geometric modeling — Rossignac 296
Shaping geometric objects by cumulative translational sweeps — Evans 343
Simple unit vectors orthogonal to a given vector — O'Connor 335
Solid modeling for production design — Wolfe 277
Trimmed-surface algorithms for the evaluation and interrogation of solid boundary representations — Farouki 314
Voronoi diagram for multiply-connected polygonal domains I: Algorithm — Srinivasan 361
Voronoi diagram for multiply-connected polygonal domains II: Implementation and application — Meshkat 373

Computer architecture
Path hierarchies in interconnection networks — Franaszek 120
Reducing execution parameters through correspondence in computer architecture — Wakefield 420

Computer performance analysis
Best and worst mappings for the omega network — Cvetanović 452
Modeling and analysis of computer system availability — Goyal 651
Performance analysis of the FFT algorithm on a shared-memory parallel architecture — Cvetanović 435

Computer-system availability
Modeling and analysis of computer system availability — Goyal 651

Cryptography
Cryptography — Coppersmith 244

Disks
The torus and the disk — Adler 224

Disk drives—mechanical analysis
System Identification: An experimental verification — Ciskowski 571

Display technology
YODA: An advanced display for personal computers — Gupta 44

Dynamic programming
Feature analysis for symbol recognition by elastic matching — Kurtzberg 91

Editors
Document convergence in an interactive formatting system — Chamberlin 58
LEXX—A programmable structured editor — Cowlishaw 73

Electromechanical design
An algorithm for automatic identification of R-fields in bond graphs — Hood 382

Fluid dynamics
Drop formation by DOD ink-jet nozzles: A comparison of experiment and numerical simulation — Shield 96

Formal methods
A CCS semantics for NIL — Smolka 556
Direct semantics of concurrent languages in the SMoLCS approach — Astesiano 512
Specification statements and refinement — Morgan 546
Transaction processing primitives and CSP — Woodcock 535

Formatting
Document convergence in an interactive formatting system — Chamberlin 58
LEXX—A programmable structured editor — Cowlishaw 73

Fourier transforms
Fourier transforms that respect crystallographic symmetries — Auslander 213

Graphics
Binary-imagine-manipulation algorithms in the Image View Facility — Anderson 16
Digital halftoning on the IBM 4250 Printer — Goertzel 2
DNA vectorgrams: Representation of cancer genes as movements on a 2D cellular lattice — Pickover 111
PANDA: Processing Algorithm for Noncoded Document Acquisition — Chen 32
Piecewise-circular curves for geometric modeling — Rossignac 296
Shaping geometric objects by cumulative translational sweeps — Evans 343
Simple unit vectors orthogonal to a given vector — O'Connor 335
Solid modeling for production design — Wolfe 277
Trimmed-surface algorithms for the evaluation and interrogation of solid boundary representations — Farouki 314
Voronoi diagram for multiply-connected polygonal domains I: Algorithm — Srinivasan 361
Voronoi diagram for multiply-connected polygonal domains II: Implementation and application — Meshkat 373
YODA: An advanced display for personal computers — Gupta 44

Group theory
The group problem and integer programming duality — Johnson 206

Handwriting recognition
Feature analysis for symbol recognition by elastic matching — Kurtzberg 91

Image processing
Binary-image-manipulation algorithms in the Image View Facility — Anderson 16
Digital halftoning on the IBM 4250 Printer — Goertzel 2
PANDA: Processing Algorithm for Noncoded Document Acquisition — Chen 32
YODA: An advanced display for personal computers — Gupta 44

Impact printer technology
Font design for high-speed impact line printers (C) Zable 679

Ink-jet printing
Drop formation by DOD ink-jet nozzles: A comparison of experiment and numerical simulation Shield 96

Integer programming
The group problem and integer programming duality Johnson 206

Integrated circuit design
Shaping geometric objects by cumulative translational sweeps Evans 343
Voronoi diagram for multiply-connected polygonal domains II: Implementation and application Meshkat 373

I/O devices
Font design for high-speed impact line printers (C) Zable 679

Logic
Factoring logic functions Brayton 187

Manufacturing
Solid modeling for production design Wolfe 277
Some aspects of the theory of statistical control schemes Yashchin 199

Mathematics
A CCS semantics for NIL Smolka 556
A view of Approximation Theory Rivlin 162
Applied mathematics, a national view Cohen 158
Cryptography Coppersmith 244
Direct semantics of concurrent languages in the SMoLCS approach Astesiano 512
Factoring logic functions Brayton 187
Fourier transforms that respect crystallographic symmetries Auslander 213
Numerical analysis and the scientific method Glimm 169
Reflections on the early days of the department Goldstine 154
Science in industry Gomory 151
Some aspects of the theory of statistical control schemes Yashchin 199
Some stability techniques for multistep methods Odeh 178
Specification statements and refinement Morgan 546
The complexity of computations by networks Pippenger 235
The group problem and integer programming duality Johnson 206
The torus and the disk Adler 224
Transaction processing primitives and CSP Woodcock 535

Mathematics (applied)
An algorithm for automatic identification of R-fields in bond graphs Hood 382
Ferroresonance Scoggin 665
Piecewise-circular curves for geometric modeling Rossignac 296
Shaping geometric objects by cumulative translational sweeps Evans 343
Simple unit vectors orthogonal to a given vector O'Connor 335
Solid modeling for production design Wolfe 277
Trimmed-surface algorithms for the evaluation and interrogation of solid boundary representations Farouki 314
Voronoi diagram for multiply-connected polygonal domains I: Algorithm Srinivasan 361
Voronoi diagram for multiply-connected polygonal domains II: Implementation and application Meshkat 373

Mechanical design
Solid modeling for production design Wolfe 277

Medicine
DNA vectorgrams: Representation of cancer genes as movements on a 2D cellular lattice Pickover 111

Metal-semiconductor contacts
Contact metallurgy development for VSLI logic Geffken 608
Electrical and microstructural investigation of polysilicon emitter contacts for high-performance bipolar VLSI Stork 617
Study of contact and shallow junction characteristics in submicron CMOS with self-aligned titanium silicide Taur 627

Models and modeling
Modeling and analysis of computer system availability Goyal 651

Natural language processing
A method for efficient storage and rapid application of context-sensitive phonological rules for automatic speech recognition Mercer 81

Networks
Path hierarchies in interconnection networks Franaszek 120
The complexity of computation by networks Pippenger 235

Packaging
Signal degradation through module pins in VLSI packaging Huang 489

Parallel processing
Best and worst mappings for the omega network Cvetanović 452
Parallel algorithms for chip placement by simulated annealing Darema 391
Path hierarchies in interconnection networks Franaszek 120
Performance analysis of the FFT algorithm on a shared-memory parallel architecture Cvetanović 435

Pattern matching
Efficient randomized pattern-matching algorithms Karp 249

Performance measurement and prediction
Efficient search techniques—An empirical study of the *N*-Queens Problem Stone 464
Exact analysis of round-robin scheduling of services (C) Takagi 484

Reducing execution parameters through correspondence in computer architecture — Wakefield — 420
The inconsistency index method for estimating the accuracy of Schweitzer's approximation — Sitaram — 475

Personal computer applications
YODA: An advanced display for personal computers — Gupta — 44

Phonology
A method for efficient storage and rapid application of context-sensitive phonological rules for automatic speech recognition — Mercer — 81

Power supplies
Ferroresonance — Scoggin — 665

Printing technology
Digital halftoning on the IBM 4250 Printer — Goertzel — 2
Font design for high-speed impact line printers (C) — Zable — 679

Process control
Some aspects of the theory of statistical control schemes — Yashchin — 199

Queueing theory and its applications
Exact analysis of round-robin scheduling of services (C) — Takagi — 484
The inconsistency index method for estimating the accuracy of Schweitzer's approximation — Sitaram — 475

Regulators
Ferroresonance — Scoggin — 665

Scientific method
Numerical analysis and the scientific method — Glimm — 169

Search strategies
Efficient search techniques—An empirical study of the *N*-Queens Problem — Stone — 464

Semantics of programming languages
A CCS semantics for NIL — Smolka — 556
Direct semantics of concurrent languages in the SMoLCS approach — Astesiano — 512
Specification statements and refinement — Morgan — 546
Transaction processing primitives and CSP — Woodcock — 535

Semiconductor technology
Contact metallurgy development for VSLI logic — Geffken — 608
Electrical and microstructural investigation of polysilicon emitter contacts for high-performance bipolar VLSI — Stork — 617
Study of contact and shallow junction characteristics in submicron CMOS with self-aligned titanium silicide — Taur — 627

Semiconductor yield analysis
Correlation analysis of particle clusters on integrated circuit wafers — Stapper — 641

Simulation
Drop formation by DOD ink-jet nozzles: A comparison of experiment and numerical simulation — Shield — 96

Solid modeling
Piecewise-circular curves for geometric modeling — Rossignac — 296
Shaping geometric objects by cumulative translational sweeps — Evans — 343
Simple unit vectors orthogonal to a given vector — O'Connor — 335
Solid modeling for production design — Wolfe — 277
Trimmed-surface algorithms for the evaluation and interrogation of solid boundary representations — Farouki — 314

Speech processing
A method for efficient storage and rapid application of context-sensitive phonological rules for automatic speech recognition — Mercer — 81

Statistics
Correlation analysis of particle clusters on integrated circuit wafers — Stapper — 641
Some aspects of the theory of statistical control schemes — Yashchin — 199

Thin films
Delamination and fracture of thin films (C) — Klokholm — 585
Oxidation of Si-rich chemical-vapor-deposited films of tungsten-silicide — Krusin-Elbaum — 634

VLSI
Signal degradation through module pins in VLSI packaging — Huang — 489

Word processing
Document convergence in an interactive formatting system — Chamberlin — 58
